Despite the fact that Harbor Master F. Mosher has recommended the Kuhio Bay wharf as perfectly safe and says "there is no danger whatever for a vessel going to the wharf," the skipper of the sailing vessel John Ena, which arrived at Hilo last Sunday from Honolulu, refuses to have her towed alongside the pier, acting on advice from the ship owners who are convinced, he says, that the wharf is unsafe.

In consequence a sullen test of temper is on between the ship owners. Despite the fact that Harbor Mas

Inspector Raymond spent two days at the industrial school this week. He looked over everything and reports that things are going on well at the institution. The school is crowded at present with boys, and that is the only complaint the inspector has to make. Vocational work is going on well and the boys are improving a lot. The school now grows all the taro it needs and has some that it sells to outsiders.

Inspector Raymond spent two days are with Mexico were sent to the president. They were as follows: The Reva. John J. Standaway," are very modish this troph ing e the control of the

STUDEBAKER SIX, \$1825 F. O. B. HONOLULU

# Visible and Invisible Values

Place on one side the outer signs of Studebaker SIX superiority—then note the still more important factors that you cannot see, but which are the real foundation for this car's greatness.

You see the simplicity of its motor and the wonderful accessibility of its parts—but you can only sense the scientific engineering which has made this possible

You recognize the masterly design which places its ignition and lighting system forward of the cylinder block-but you cannot appreciate to its full the superb engineering that makes this unit absolutely dependable.

You see that its left-hand drive and center control place you where your every motion is a natural impulse but you can only feel the free, easy action that carries your orders to the heart of the ear.

You see the visible characteristics of the full floating rear axle-but you cannot see the fransmission and differential gears, with their perfect alignment and absolute accuracy of pitch and face, or the full equipment of Timken bearings.

You see a motor responsive to your slightest touch—but you can only feel in that perfeet response the best-balanced six-cylinder motor ever placed in a car.

You will find that motor growing sweeter and smoother with hard service but you cannot see the reasons for that betterment-its engineering, its alignment and its faultless lubrication.
